

Lab Sheet #1

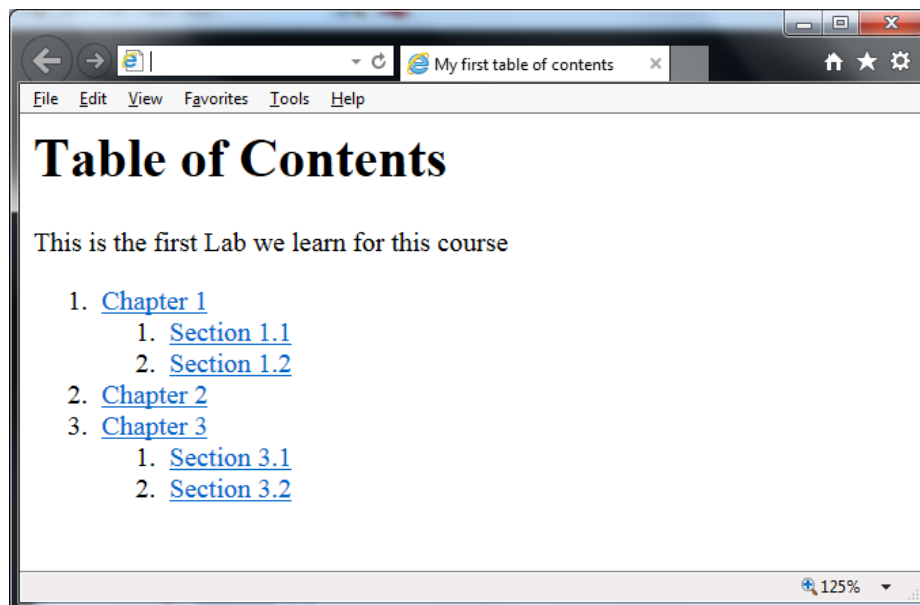

Internet Applications, 14013104-3

Week# 4, Monday 21 Sept. 2020

Write the HTML code to build a table of content example. The table of content (TOC) is a list of topics. Each topic refers to a section within the same page.

You will need to design a document that includes a list (you can use `` or ``) where each item is a hypertext link (`<a>`). The requirements are as following:

- 1- Use list to create the list of topics. The list should include at least 4 items.
- 2- Use links to make each topic attached to its own text section.
- 3- Make sure that you follow the standards of HTML.
- 4- Use `<h1>` to create the heading of each content section. Use `id` attribute to assign unique ID's to each heading bookmark.
- 5- Use `<p>` to insert text.

- 6- The above is sample TOC. Try to improve the appearance of your document. Use `<hr />` or

**
**

- 7- Extend your TOC example to create more sophisticated one with topics and subtopics. The following code could be a guide. Modify it to perform your task.
